SPACE IS LIMITED - ACT NOW

Benchmarking *is the process of comparing one's business processes and performance metrics to industry bests or best practices from other industries.*

The Benchmarking Site Visits program is an important part of SEA's collaboration value stream. SEA members connect and share their results and lessons learned while implementing continuous improvement and the SEA Roadmap. This process ensures that the collective learning benefits all members, thus accelerating the rate of learning and improvement!

Hixson Metal Finishing will open its doors to SEA Members and invited guests to witness how Hixson is conquering process variability and turning it into improved cashflow, more efficient operations, and employee ownership. See what the SEA Roadmap and process maturity has done for them and what it can do for you!

- Experience a shop that has made the lean journey
- Learn from their successes and failures
- Connect with other industry trailblazers
- Be a part of this fantastic event in beautiful, sunny Southern California to promote suppliers who want to make a significant difference in our industry

Hixson Metal Finishing is a dedicated A&D Industry supplier for over 50 years and a proud recipient of many awards including SEA's Leadership and Culture, Operational Excellence, Leadership Excellence and Supply Chain Innovation Awards.
